Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     13324
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               13384
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           13504
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    13684
fourth recombination sites, or the second and third recombination sites are capable of reacting with a same recombination site, and preferably are identical. The first and second recombination sites, or the third and fourth recombination sites, do not recombine with each other or with a same recombination site. The vector is useful for producing large amounts of double-stranded RNA which can be used for silencing target nucleic acid sequences. The vectors can also be ded to convert a DNA fragment into an inverted repeat structure. Plants transformed with a vector from the present invention can be used in a conventional breeding scheme to produce more plants with the same characteristics or to introduce a chimeric gene for reduction of the phenotypic expression of mucleic acids. The present sequence represents an acceptor vector nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   361
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              541

The present invention describes a vector (I) comprising operably linked DNA fragments having: (a) origin of replication allowing replication in a recipient cell, preferably in bacteria auch as Bacherichia coll; (b) selectable marker region capable of being expressed in the recipient cell c selectable marker region capable of being expressed in the recipient cell c region capable of being recognized by RNA polymerases of a eukaryotic cell or by prokaryotic RNA polymerases of a eukaryotic cell or by prokaryotic RNA polymerases (iii) first, second, third and courth recombination sites, (iii) first, second, third and courth recombination sites, or the second and third recombination sites, or the second and third recombination sites, or the first and second recombination sites, or the third and fourth recombination sites, do not recombination site, or the third and courth recombination site. The vector is used for silencing target nucleic cald sequences. The vectors an also be used to convert a DNA fragment tite on inverted repeat structure. Plants transformed with a vector from the present invention of the phenotypic expression of mucleic chimeric gene for reduction of the phenotypic expression of mucleic acids. The present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     13445 TCTTATACTTTTCTCTTACAAGTCGTTCGGCTTCATCTGGATTTTCAGCCTCTATACTTA 13504

The present invention describes a vector (I) comprising operably linked DNA fragments having: (a) origin of replication allowing replication in a recipient cell, preferably in bacteria such as Escherichia col; (b) selectable marker region capable of being expressed in the recipient cell; and (c) a chimeric DNA construct comprising: (i) promoter or promoter cell or by prokaryotic RNA polymerases of a eukaryotic cell or by prokaryotic RNA polymerases of a eukaryotic cell or by prokaryotic RNA polymerases; (ii) first, second, third and fourth recombination sites; or the second and third recombination sites; or the second and third recombination sites; are capable of reacting with a same recombination site, and preferably are identical. The first and second recombination site, or the third and court recombination sites, do not recombination site, or the third and same recombination site, The vector is useful for producing large amounts of double-stranded RNA which can be used for silencing target nucleic convert a DNA fragment into an inverted repeat structure. Plants transformed with a vector from the present invention can be used in a conventional breeding scheme to the present invention and the same characteristics or to introduce and the converted repeat structure. Plants transformed with a vector from the present invention can be used in a conventional breeding scheme to the present invention and the same characteristics or to introduce and the present invention and the same characteristics or to introduce and the same characteristics or to introduce and the same characteristics or to introduce and the same characteristics or to introduce and the same characteristics or to introduce and the same characteristics or to introduce and the same characteristics or to introduce and the same characteristics or to introduce and the same characteristics or to introduce and the same characteristics or to introduce and the same characteristics or to introduce and the same characteristics or to introduce and the same chara
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New vectors comprising operably linked DNA fragments having an origin of replication, a selectable marker and a chimeric DNA construct, useful for silencing target nucleic acids and for producing large amounts of double-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               122 GCCAACTTTGTACAAAAAGCTGAACGAGAAAGGTAAAATGATATAAATATCAATATATT

The first and fourth recombination sites, or the second and third recombination sites are capable of reacting with a same recombination site, and preferably are identical. The first and second recombination sites, or the third and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New vectors comprising operably linked DNA fragments having an origin of replication, a selectable marker and a chimeric DNA construct, useful for silencing target nucleic acids and for producing large amounts of double-stranded RNA.

                                                                                                                                                                                                                                                                                                                  2
fourth recombination sites, do not recombine with each other or with a same recombination site. The vector is useful for producing large amounts of double-stranded RNA which can be used for silencing target mucleic acid sequences. The vectors can also be used to convert a DNA fragment into an inverted repeat structure. Plants transformed with a vector from the present invention can be used in a conventional breeding scheme to produce more plants with the same characteristics or to introduce a chimetic gene for reduction of the phenotypic expression of nucleic acids. The present sequence represents an acceptor vector nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240
